

Walk. Ride. Drive. Smarter.

YOUR CONNECTED VEHICLE EQUIPMENT

All drivers participating in the THEA Connected Vehicle Pilot will receive equipment enabling their cars to “talk” to other vehicles, traffic signals and more. This wireless communication can help you drive safely and keep traffic moving.

The equipment includes an enhanced rearview mirror, a small antenna, and a dedicated short-range communications device upfront in the vehicle. The equipment is free and yours to keep upon completion of the pilot.

REARVIEW MIRROR

You will receive a new rearview mirror that displays safety messages in certain hazardous situations. A speaker built into the mirror will issue audio alerts.

SHORT-RANGE RADIO

The short-range radio is a small, rectangular device that will be attached either under the dashboard, behind glovebox, or under seats of your car. The length of the unit will not exceed 8.25 inches.

ANTENNA

The antenna will be installed on the roof of your car. It will be attached magnetically, but some may use a safe, removable adhesive. The antenna will not damage or leave marks on your car.

The THEA Connected Vehicle Pilot is a research project sponsored by the U.S. Department of Transportation to test the potential safety, mobility and environmental benefits of connected vehicle technology.
